

Information Networking in Asia: Advanced Information Processing Technology

Information networking is a rapidly growing field that is transforming the way we live, work, and communicate. In Asia, the development of information networks is particularly important due to the region's large population and growing economy.

This book provides a comprehensive overview of the latest advances in information networking in Asia. The book is divided into three parts:

- **Part 1: Grundlagen**
- **Part 2: Anwendungen**
- **Part 3: Trends**

The first part of the book provides an overview of the basic principles of information networking. This includes chapters on data communication, networking, and information technology.
